PATIENT NAME Tarek Emad Ibrahim			Registered 13-03-2024 09:25:45	Collected 13-03-2024 09:26:03
Visit Number 2442250152			Authenticated 13-03-2024 15:36:17	Printed 13-03-2024 17:20:10
Age 27 Year	Gender male	Referred By احمد سليم : Prof		Client ID 46158

MOLECULAR BIOLOGY REPORT

Test Name	Result	Unit	Reference Range
Covid 19 - PCR	positive		positive

N.B. :Source: Nasopharyngeal Swab SARS CoV-2 PCR assay is an invitro diagnostic reverse transcription based Real Time PCR for the qualitative detection of SARS-CoV-2 RNA in upper respiratory specimens Result interpretation - A Positive Result indicates the presence of SARS CoV-2 RNA. Correlation with the patient history, clinical signs and other diagnostic findings is necessary to determine the patient's infectious status - A Negative Result indicate that either the SARS CoV-2 RNA is not present in the collection sample or is present in a very low concentration below the assay's lower limit of detection (which may be influenced by the stage of infection). Correlation with the patient history, clinical signs, other diagnostic information and epidemiological information is necessary for patient management.
